

ABSTRACT

The present invention relates to a network connection apparatus using an internet phone and a method of the same, the apparatus comprises an internet
5 phone main unit usable as an ordinary telephone or an internet phone in accordance with an operation of a user, a function extending unit for interfacing a function pack and a network CPU unit performing an independent function respectively, and a network CPU unit for controlling an audio signal
10 transmitted/received through a PSTN and controlling a signal received from a network by controlling the internet phone main unit and function extending unit. Accordingly, the present invention is capable of communicating with a plurality of wire IP phones with one line, and operating a multifunction digital apparatus with a moderate expense, and upgrading the apparatus easily.
